About Visioneer OneTouch®

From its conception, Visioneer OneTouch has changed the way people scan by reducing multiple steps in the scan process to a single touch of a button – from 14 steps to just 1. Button scanning is a great idea and most scanners and MFP's now include a SCAN button intended to save time or steps. Everyone has accepted that ease-of-use is the goal.

But not all buttons are created equal and sometimes the ease-of-use goal gets lost along the way. After pressing the SCAN button, some scanner devices require additional mouse clicks, file naming or destination confirmation, so there are highly varying results when you click the SCAN button. Many have limited destinations and don't extend to server-based applications such as Microsoft SharePoint or custom applications.

This is where Visioneer OneTouch is different. Visioneer OneTouch requires just one touch to process the entire scan job. It initiates the scan, and delivers the complete document to its destination, no additiona' clicking, no forced confirmation of destination, no partial jobs.

Visioneer OneTouch with Kofax® VRS™ (Virtual ReScan®) technology is an integrated software solution that combines the ease-of-use of OneTouch scanning with the superior image quality achieved with Kofax VRS technology that results in scanned images that are of the best quality possible in one simple step.
